

Bucket conveyor

"Advanced technological systems for chemical and food industry"

Application:

Bucket conveyors are fixed devices designed for conveying building materials as well as materials in food and agricultural industry.

Advantages

All elements of the machine which are in contact with the transported material can be made of acid-resistant steel. The conveyor is fully adapted to the conditions of the plant and to the requirements of manufacturing process. Any series of types of buckets available. Affordable prices.

Description

The conveyor is a welded structure, made of usual quality steel. It consists of:

- the base equipped with the charging point and a tie tightening system
- heads equipped with a motoreducer, coupling and a discharging point
- elements of casing
- servicing platform

Technical data:

The height and the construction of the conveyor, the type of buckets and power consumption are decided on the basis of the information about the product and parameters provided by the customer.

Offered devices can differ from presented on the photos.
