

# Cyclones

"Advanced technological systems for chemical and food industry"

## Application:

Cyclones (dust collectors) are designed for cleaning the gases from solid particles in aspiration systems of various machines. Cyclones are used in all branches of industry in which dust is present.

## Advantages

Simple and light construction. The cyclone can be made of stainless materials. The device can be placed inside as well as outside the engine room. If requested, groups of cyclones (multicyclones) can be manufactured as well. Affordable prices.

## Description

The cyclone is built of segments which facilitates their assembly. They can be made of usual quality steel or stainless steel. The upper part is a cylindrical tank to which an inlet connection is fixed. The lower conical part ends with a dust pipe.

The outlet pipe is inserted from the top and runs exactly through the central part of the cyclone.

## Technical data:

The construction and flow capacity of the cyclone is decided on the basis of parameters and information about the product provided by the customer.

Offered devices can differ from presented on the photos.
