

# Crushing conveyor

Professional technological systems for the food and chemical industry

## Application:

The crusher is a device which transfers the potato mass from the final evaporator towards the drier, simultaneously crushing the cooked potatoes.

## Advantages

Simple construction enabling the device to be moved in case there is a need to wash or repair it. High functionality. Possibility of individual adjustment to the needs of the customer.

## Description of the machine:

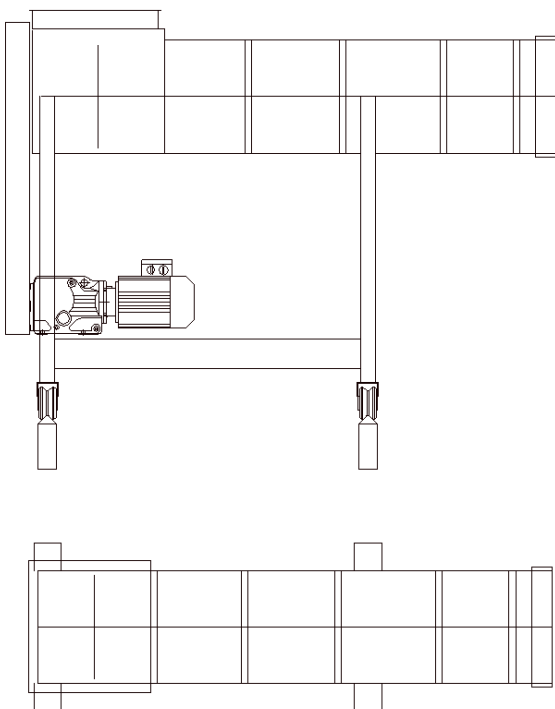

The crushing conveyor consists, among other things, of the following elements:

- body
- worm,
- worm drive,
- crushing partition.

The potatoes are transported by means of a worm, which pushes them through slots in the partition made of bars.

## Technical data:

- Steel construction ..... – acid-resistant steel
- Motor power ..... – 3kW
- Capacity ..... – adjusted to the line

Offered devices can differ from presented on the photos.
